

Rocky Prabowo

Software Engineer – Backend Specialist

Central Jakarta, Indonesia | (+62) 856 0946 9838 | work@rocky.my.id

Professional Summary

Backend-focused Software Engineer with 6+ years of experience building production backend services, integration systems, and multitenant platforms across telecom, finance, ERP, surveillance, and edge-device environments. Experienced in systems where latency, reliability, offline operation, and operational constraints directly affect production outcomes.

Technical Skills

Languages	: Go, TypeScript/Node.js, Python, PHP
Backend Engineering	: REST API, gRPC, microservices, distributed systems, multitenancy, event-driven architecture
Databases & Messaging	: PostgreSQL, MySQL, MongoDB, Redis, RabbitMQ, Kafka, NATS, ArangoDB
Infrastructure	: Docker, Kubernetes, GitLab CI, AWS, OpenTelemetry, Prometheus, Grafana, Datadog
Auth & Identity	: JWT, OAuth2, OIDC, SAML, Keycloak, Active Directory
Frontend	: React, Vue 3, SolidJS, Flutter

Work Experience

Backend Developer **January 2026 – Present**
PT Elektronik Distribusi Otomatisasi Terkemuka (eDOT)

Project-based contract under PT Hermes Solusi Integrasi

- Designed and developed backend services for the **ework Sales Force Automation** leaderboard, supporting supervisor-wide salesperson rankings in a multitenant system.
- Optimized caching and API response paths for production traffic, supporting approximately **21,000 daily active users** with **65 ms P50** and **82 ms P95** latency in the production environment.
- Built configurable achievement variables and metric calculation components for **esuite ERP platform**, enabling tenant-specific leaderboard formulas, performance metrics, and data-ingestion workflows.
- Developed backend services for POS license management, device registration, device status monitoring, and tenant migration tooling.

Tech: Go, REST API, gRPC, MongoDB, RabbitMQ, Redis, Docker, k6, AWS, Grafana, OpenTelemetry.

Full Stack Engineer **October 2025 – December 2025**
PT BFI Finance Indonesia, Tbk

Engagement ended early due to business restructuring

- Delivered frontend and backend updates for **Loan Origination Re-Architecture**, a data-driven loan origination platform.
- Built experimental web data extraction workflows using browser automation, computer vision, and local AI inference for sources where DOM-based scraping was impractical or unreliable.

Tech: Go, Python, SolidJS, HTMX, ArangoDB, NATS, RabbitMQ, Temporal, Selenium, WebDriver, llama.cpp, Google Cloud Vision.

Software Engineer **April 2025 – November 2025**
PT XLSmart Telecom Sejahtera, Tbk

Contractor under PT Bumi Amarta Teknologi Mandiri

- Designed and developed backend services for the XLSMART corporate website, transforming internal CMS data into public-facing API responses.
- Implemented caching and cache invalidation flows to keep website content available and consistent during recurring CMS downtime.
- Introduced automated TypeScript SDK generation for React/Next.js to reduce frontend/backend contract mismatch and accelerate frontend integration.

Tech: Go, Fiber, Node.js, Next.js, Hydra Express, Laravel, MariaDB, Redis, AWS, GitLab, Grafana.

Backend Developer

December 2024 – April 2025

PT Indosat, Tbk

Contractor under PT Prima Raya Solusindo

- Developed backend integration services for the **IM3 WhatsApp chatbot**, enabling prepaid eSIM ordering flows and number-pool service updates.
- Built voucher management and claim systems for **myIM3** and **Bima+** partner promotional campaigns, capable of handling high-concurrency claim traffic during peak campaign periods.
- Implemented multilingual email support for prepaid eSIM activation and registration flows.

Tech: Go, Labstack Echo, GORM, Redis, MariaDB/MySQL, Docker Swarm, GitLab.

Backend Developer

August 2023 – December 2024

PT Millenio Amerta Data / AssistX Enterprise

- Designed an air-gapped on-premise query system for **Garuda ID**, a match-day access control system for Indonesian national team football events, allowing officers to validate ticket and face-recognition data without relying on public Internet connectivity.
- Built synchronization services for Garuda ID integrating BookMyShow ticketing and face-registration data.
- Provided on-site technical support, operational documentation, monitoring, troubleshooting, and post-event data extraction for Garuda ID access-gate appliances during Indonesian national team matches against Japan and Saudi Arabia in November 2024.
- Re-architected a surveillance monitoring dashboard from a Node.js/MySQL monolith into a Go, React, and SQLite-based system for constrained edge-device deployments.
- Designed a plugin-based architecture for integrating surveillance monitoring dashboard with camera stream compression services via REST API and AI analytics services via gRPC.
- Developed Go microservices to incrementally replace legacy ingestion flows and improve write-intensive AI analytics processing from edge devices deployed across 10,000+ Bank BRI cash-recycling machines.

Tech: Go, Python, FastAPI, Flask, TypeScript, Node.js, React, MongoDB, MySQL, Redis, BullMQ, Async, gRPC, ONVIF, SQLite, Docker, Prometheus, k3s, Microsoft Azure, Google Cloud.

Full Stack Developer

July 2019 – June 2023

PT Lokacipta Visi Digital

Freelance 2019–2020, then full-time

- Designed, developed, and maintained multitenant-capable CRM and ERP systems for eight SMEs across lead management, sales workflows, inventory, reporting, and role-based access.
- Delivered CRM/ERP workflow improvements linked to client-reported **10–35%** gains in lead conversion and sales performance.
- Led development of custom karaoke business systems across South Sumatra, covering network-connected playback, POS, online payments, inventory controls, and business management modules.
- Reduced client-reported playback complaints and inventory/cash-loss incidents through improved system reliability, controls, and operational reporting.
- Contributed to additional NDA-covered systems involving C#, .NET, Java/Spring Boot, Ruby on Rails, Cassandra, Oracle Database, Keycloak, and Elasticsearch.

Tech: TypeScript, Nest.js, Vue 3, Nuxt, Node.js, PHP, Laravel, PostgreSQL, SQLite, Redis, Kafka, RabbitMQ, Keycloak, Elasticsearch, Docker, k3s, Flutter.

Education

Universitas Sriwijaya

Bachelor of Computer Science, Information Systems (S.Kom) – Graduated 2021

Training and Certifications

- Back End Developer by Dicoding – May 2022
- Scalable Web Service with Golang by Hacktiv8 – October 2022

Languages

Bahasa Indonesia – Native

English – Professional
